Night Driver

# Drive Fearlessly into the Night

“HD LIKE VISION IN LOW LIGHT”

— WENDI

“REDUCES FLARE & GLARE”

— KRISTIE

“IT MUTED THE BRIGHTNESS OF HEADLIGHTS”

— NATALIE

## What is ActiveAR Night Driver?

ActiveAR Night driver is a scientifically formulated coating that softens and offsets harsh light on the road without compromising vision on the color spectrum.

## How Does it Work?

The coating filters out yellow light, reducing light glare and improving color saturation, particularly primary colors of red, green and blue. It is most effective in low light situations.

## Who is ActiveAR Night Driver For?

Everyone! Every single person who has tried these had said the same thing... WOW! This includes those who have cut back on night driving due to issues with glare or vision at low light to teenagers who are new drivers.

ActiveAR Night Driver is available on many lens designs and lens types and a great second pair option to keep in your car.
